EDUCATION

UC San Diego

Master of Science in *Computer Science and Engineering - Focus on AI branch* | GPA: 3.8/4.0

San Diego, CA

Sep 2024 – Jan 2026

- **Relevant coursework:** AI Agent, Machine Learning, Deep & Reinforcement Learning, Optimization methods, Algorithm Design & Analysis, Princ/ DB System, Computer Network & Network Programming, Princ/Computer Architecture

Rutgers, The State University of New Jersey

Bachelor of Science in *Computer Science* | GPA: 3.9/4.0

New Brunswick, NJ

Sep 2021 – Jan 2024

- Ranked in Top 5% of class all the time | Dean's List [2022 Spring, 2022 Fall, 2023 Spring, 2023 Fall]

SKILLS

AI Agent: LangChain, LangGraph, CAMEL, Coze, OpenRouter APIs, MCP, n8n

Machine Learning & Data Science: PyTorch, scikit-learn, XGBoost, LightGBM, Librosa, Matplotlib

Programming: Python, Java, C, Go, JavaScript

Frameworks & Tools: Docker, Flask, FastAPI, gRPC (Go), Streamlit, PyMuPDF, Git, VSCode, MySQL, LLMs Integration

Software Development: Socket programming, concurrent & distributed systems, ETL pipeline design, algorithm optimization

INDUSTRIAL EXPERIENCE

AI Agent Developer Intern | **LA City** | remote

June 2025 – Sep 2025

- Integrated support for 5+ popular LLMs (Gemini, OpenAI, Llama, etc.) via OpenRouter and HuggingFace APIs using LangChain abstractions, boosting model-selection flexibility by 200%.
- Designed and deployed autonomous LangChain AI agents to query the MOU website and fetch 1,500+ PDF files per week with 98% accuracy—slashing manual retrieval effort by 85%.

IT Developer | **SVIEF** | San Jose, CA

May 2024 – Sep 2024

- Architected scalable web systems with secure FTP integration and streamlined data workflow processing and cleaning 500K+ records using SQL and Pandas to boost data integrity and management efficiency by 20%.
- Led comprehensive testing to identify and resolve 95% of critical bugs and authored detailed data-handling and architecture reports, improving system reliability by 20% and overall efficiency by 15%.

Python Developer Intern | **Shenzhen Insignia Innovation Software Co.,Ltd.** | China

Aug 2023 – Mar 2024

- Engineered a robust PyMuPDF-based resume parser API that processed over 10,000 PDFs end-to-end—developing flowcharts and 50+ Pytest unit/integration tests to handle multi-column layouts and non-UTF8 encodings—cutting project ambiguities by 20% and achieving 99% data accuracy.
- Designed and deployed Flask endpoints to convert parsed data into JSON and persist it in a relational database, powering the LLM training pipeline and driving a 30% increase in processing speed and a 20% uplift in end-to-end data accuracy.

Intern | **Shenzhen HKJC Technology Development Ltd.** | China, Hong Kong

May 2023 – June 2023

- Collaborated with cross-functional teams to solve technical issues, deliver key project milestones, and support 20+ clients—streamlining communication and processes to achieve 95% customer satisfaction. Reorganized 200+ files, cutting retrieval time by 30%
- Reorganized and standardized 200+ files, cutting retrieval time by 30% and boosting overall operational efficiency.

SELECTED RESEARCH/PROJECTS

MOU chatbot | **LA City** | remote

Python | *LangChain* | *Streamlit* | *OpenRouter* | *LLMs APIs Application (DeepSeek, Gemini, GPT, etc.)*

June 2025 – Sep 2025

- Developed a LangChain + Streamlit chatbot that indexes 200+ MOU PDF documents, achieving <2s query response with vector search and retrieval-based generation.
- Designed autonomous AI agents leveraging LangChain toolkits + Google Search to automatically fetch and update 1,500+ MOU PDFs weekly, reducing manual retrieval by 85%.

Trading Agent Project | **UCSD** | San Diego, CA

Jun 2025 – Sep 2025

Python | *LangChain* | *LangGraph* | *APIs* | *Docker* | *RL* | *Data Cache* | *base on TauricResearch*

- Engineered a multi-agent trading system with analyst, risk manager, and trader agents using LangChain & LangGraph, generating structured BUY/SELL/HOLD directives with logprob-based confidence scoring.
- Implemented OHLC data caching and daily Backtrader backtesting, reducing API calls by 70% while improving evaluation reliability across 5-day horizons.
- Containerized system with Docker and deployed on Render/Kubernetes, enabling reproducible pipelines and real-time execution with adjustable risk management.
